

LLMs Beyond Chatbots: Diverse Applications Await!

- While chatbots steal the spotlight, LLMs and generative AI offer a plethora of applications.
 - Next word prediction forms the bedrock, extending beyond chatbots to various text generation tasks.
-
- ❖ **Essay Writing:** Prompt the model to craft essays based on given topics, showcasing its ability to generate coherent narratives.
 - ❖ **Conversation Summarization:** Provide dialogue as a prompt, allowing the model to summarize conversations with natural language fluency.
 - ❖ **Translation Tasks:** From traditional language translations to converting natural language into machine code like Python, LLMs excel in bridging linguistic gaps.
 - ❖ **Information Retrieval:** Harness LLMs for named entity recognition, extracting people and places from text, showcasing its prowess in text classification.
 - ❖ **Integration with External Data:** Augment LLMs by linking them to external datasets or APIs, enriching their understanding and enabling real-world interactions.
